

Video Labs Adds USB Capacity To Extensive Media Services

Rockville, MD-----

Video Labs, the Rockville, MD based media marketing and services firm announced expansion of its USB duplication services with the addition of a USB Shark tower. This new USB (flash memory) production resource utilizes technology which can duplicate files containing significant storage requirements.

Small and thin, USB drives can be used to store, transfer and upload files easily onto any computer. When connected to a USB drive, this flash memory is treated just like any removable disc. Having already duplicated content onto thousands of USB drives, the devices have been used to support Video Labs clients in the areas of medical research, software application, and data storage. The company's clients have chosen to distribute some of their media on USB drives in large part because of significant capacity and portability that is offered. USB cards (with the look and size of a credit card) are also viable memory devices that are being used by Video Labs clientele.

With the increase in USB duplication capability, Video Labs continues their commitment to invest in technology and media distribution services. With its increase in capacity, Video Labs enhanced solutions now offers its clientele the widest range of Videotape/Broadcast duplication, High Definition cloning, International standards conversion, Blu-ray/DVD/CD duplication/replication, authoring, packaging, distribution and digital media delivery. Video Labs continues to offer its clientele rush service every day of the year.
